EDUCATION

Cleveland State University
Bachelor of Science in Computer Science

Cleveland, OH
Expected May 2028

Cuyahoga Community College
Associate of Science in Computer Science

Cleveland, OH
Expected May 2026

EXPERIENCE

Founder & Backend Engineer

Nov. 2025 – Present

WordLoot (live) | wordloot.xyz

Python | Supabase | PostgreSQL | Payments & Ledger

- Built the backend of a live real-money word-prediction platform as sole developer: scoring engine, payout infrastructure, balance ledger, and daily round-generation system
- Modeled all balances as an append-only ledger used as the single source of truth, keeping every coin traceable and balances reconcilable instead of editing mutable balance columns
- Engineered deterministic round resolution so identical inputs always produce identical, testable, auditable payouts
- Integrated crypto deposits/withdrawals, reconciling on-chain events with balances exactly once (no double credits or lost funds), and enforced solvency invariants so payouts never exceed the pot

Applied ML Engineer

May 2025 – Aug. 2025

Forte

Python | Data Analysis | ML Pipelines

- Developed end-to-end ML workflows for data ingestion, transformation, modeling, and evaluation
- Applied hypothesis testing and statistical analysis to validate model behavior
- Built anomaly detection and clustering systems to identify patterns in complex datasets
- Performed feature engineering and dimensionality analysis to improve model performance

Airbnb Host & Operations Manager

5.0★ Rating

Independent

Data-Driven Operations

- Manage end-to-end guest operations: communication, booking logistics, issue resolution, and post-stay optimization
- Designed automated backend processes for scheduling, cleaning coordination, pricing optimization, and review management

PROJECTS

Simple Rents | *React, Next.js, AWS (Amplify, Lambda, API Gateway, RDS, Cognito, S3, SES), Prisma*

WIP

- Building a full-stack property rental management platform with a React / Next.js frontend hosted on AWS Amplify
- Implemented user authentication and authorization with Amazon Cognito
- Designed a serverless backend using Amazon API Gateway routing to AWS Lambda functions
- Modeled application data in Amazon RDS (PostgreSQL) through the Prisma ORM, with file storage in Amazon S3
- Automated recurring jobs via EventBridge, sent notifications through Amazon SES, and monitored the system with CloudWatch

What's The Move (WTM) | *React Native, Expo, TypeScript, Mapbox, Supabase, PostGIS*

In Progress

- Map-first nightlife discovery app: browse nearby venues anonymously, view recent community reports, and “bump” venues you plan to visit
- Built a cross-platform mobile app with React Native, Expo, and TypeScript (Expo Router navigation, Mapbox interactive map)
- Backed by Supabase (Auth + PostgreSQL); used PostGIS for geospatial “venues-in-view” queries with map-bound refresh, marker clustering, and nightly-expiring activity data

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, Bash

Frameworks & Libraries: React, Next.js, React Native, Expo, Node.js, Prisma, pandas, NumPy, scikit-learn

Cloud & Databases: AWS (Amplify, Lambda, API Gateway, RDS, S3, Cognito, SES, EventBridge, CloudWatch), Supabase, PostgreSQL, PostGIS

Tools & ML: Git, GitHub, Docker, Mapbox; Predictive Modeling, Hypothesis Testing, Clustering, Anomaly Detection, Exploratory Data Analysis
