EDUCATION

Cleveland State University
Bachelor of Science in Computer Science

Cleveland, OH
Expected May 2028

Cuyahoga Community College
Associate of Science in Computer Science

Cleveland, OH
May 2026

EXPERIENCE

Applied ML Engineer Intern
Ohio Supercomputer Center

May 2025 – Aug. 2025
Python | PyTorch | Forte | ML Pipelines | HPC

- Built an end-to-end out-of-distribution (OOD) image detection pipeline covering ingestion, feature extraction, modeling, and evaluation across 1,200 CIFAR images (1,000 in-distribution, 200 out-of-distribution)
- Extracted deep embeddings with three pre-trained vision models (CLIP, ViT-MSN, DINOv2) and reduced feature dimensionality from 1,000 to 400 to make PRDC evaluation tractable on shared GPU cluster hardware
- Trained a Gaussian Mixture Model over in-distribution features to score unseen images, achieving clear separation with the majority of the 200-image OOD test set scoring near 1.0 while real images scored low
- Ran all jobs over SSH on the Cardinal HPC cluster and delivered reproducible CSV outputs, score distributions, and histogram visualizations to research mentors

Founder & Full-Stack Engineer
WordLoot | wordloom.xyz

Nov. 2025 – Present
React | TypeScript | Supabase | PostgreSQL | Edge Functions

- Built and launched a live word-prediction platform as sole developer, processing 240+ bets across 80+ resolved rounds and \$1,750 in wagering volume
- Developed an automated settlement engine that issued 170 payouts using an append-only PostgreSQL ledger as the authoritative source for balances and transaction history
- Engineered deterministic, auditable round resolution and achieved a 79% multi-day return rate among bettors, with deposited funds circulating 2.3× through subsequent wagering
- Integrated crypto deposits and withdrawals with idempotent transaction processing, preventing duplicate credits and enforcing that aggregate payouts never exceeded available round funds
- Built creator referral and analytics infrastructure supporting 8 active creators, along with real-time pot updates and commit-reveal fairness verification

Founder & Full-Stack Engineer
Simple Rents

2026 – Present
React | Next.js | AWS | PostgreSQL | Prisma

- Building a full-stack property rental management platform with a React / Next.js frontend hosted on AWS Amplify, covering listings, applications, leases, and tenant/manager dashboards
- Designed a serverless backend using Amazon API Gateway routing to AWS Lambda functions, with user authentication and role-based authorization through Amazon Cognito
- Modeled application data in Amazon RDS (PostgreSQL) through the Prisma ORM, with file storage in Amazon S3; automated recurring jobs via EventBridge, notifications through Amazon SES, and monitoring with CloudWatch
- Currently supporting 31 units under management and 29 active tenants across listing, application, and lease workflows

PROJECTS

What's The Move (WTM) | *React Native, Expo, TypeScript, Mapbox, Supabase, PostGIS*

In Progress

- Map-first nightlife discovery app: browse nearby venues anonymously, view recent community reports, and “bump” venues you plan to visit
- Built a cross-platform mobile app with React Native, Expo, and TypeScript (Expo Router navigation, Mapbox interactive map)
- Backed by Supabase (Auth + PostgreSQL); used PostGIS for geospatial “venues-in-view” queries with map-bound refresh, marker clustering, and nightly-expiring activity data

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, Bash

Frameworks & Libraries: React, Next.js, React Native, Expo, Node.js, Prisma, PyTorch, pandas, NumPy, scikit-learn

Cloud & Databases: AWS (Amplify, Lambda, API Gateway, RDS, S3, Cognito, SES, EventBridge, CloudWatch), Supabase, PostgreSQL, PostGIS

Tools & ML: Git, GitHub, Docker, Mapbox, Jupyter, SSH/HPC; Predictive Modeling, Hypothesis Testing, Clustering, Anomaly Detection, Exploratory Data Analysis
